

PARTIAL RETURN

Returning part of an order, within the window

An end-to-end walkthrough — eligibility, a partial return, returning again over time, the processed credit, and guardrails, with the API used at each step.

What this walkthrough covers

01

Which orders can be returned

Return shows only on Fulfilled orders inside the 14-day window that aren't returns or switches.

API [Get Orders](#)

02

A partial return

Return fewer licences than a line's full quantity; the credit is available afterwards.

API [Create Order](#) · [Get Order Details](#)

03

Returning again over time

Multiple partial returns against the same line, tracked by remaining quantity.

API [Create Order](#)

04

Guardrails

MOQ offers and Three-Year Commit minimums block a return, with a partner-facing reason.

SECTION 01

Which orders can be returned

A Return items action shows only on eligible Purchase History rows.

WHICH ORDERS CAN BE RETURNED

Return items shows only on eligible orders

CodeGen's Purchase History lists every order, but Return items appears only on the Fulfilled new order placed within 14 days.

The switch order (use revert instead), the prior return, and the 40-day-old order don't show it — no disabled state, the action simply isn't there.

SECTION 02

A partial return

Return fewer licences than the full quantity, then read the processed credit.

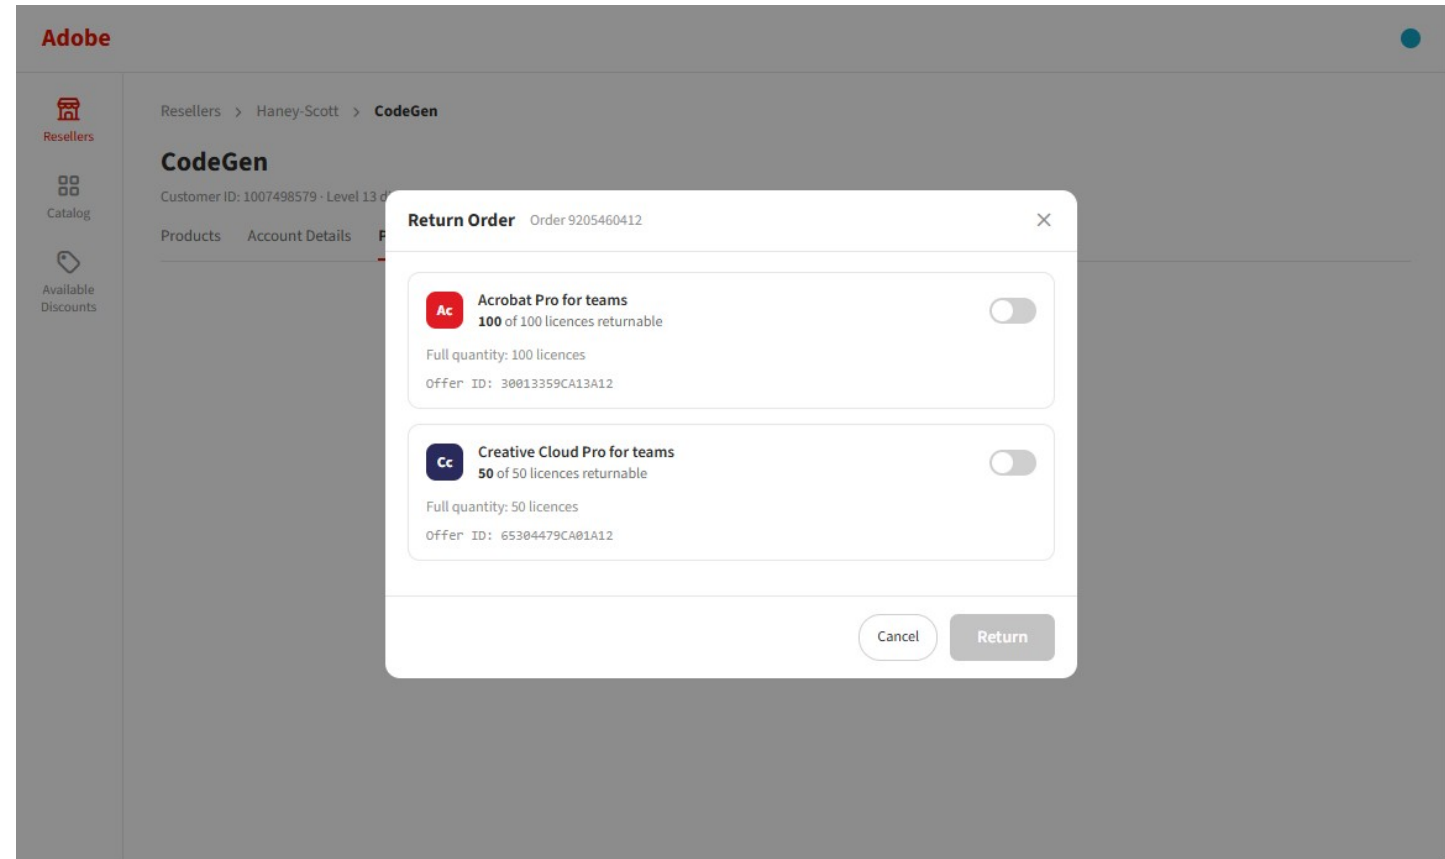

A PARTIAL RETURN

1

Open the return dialog

The dialog lists each line item with its remaining returnable quantity — here 100 of 100 and 50 of 50, both fully returnable.

Return stays disabled until a line is toggled on.

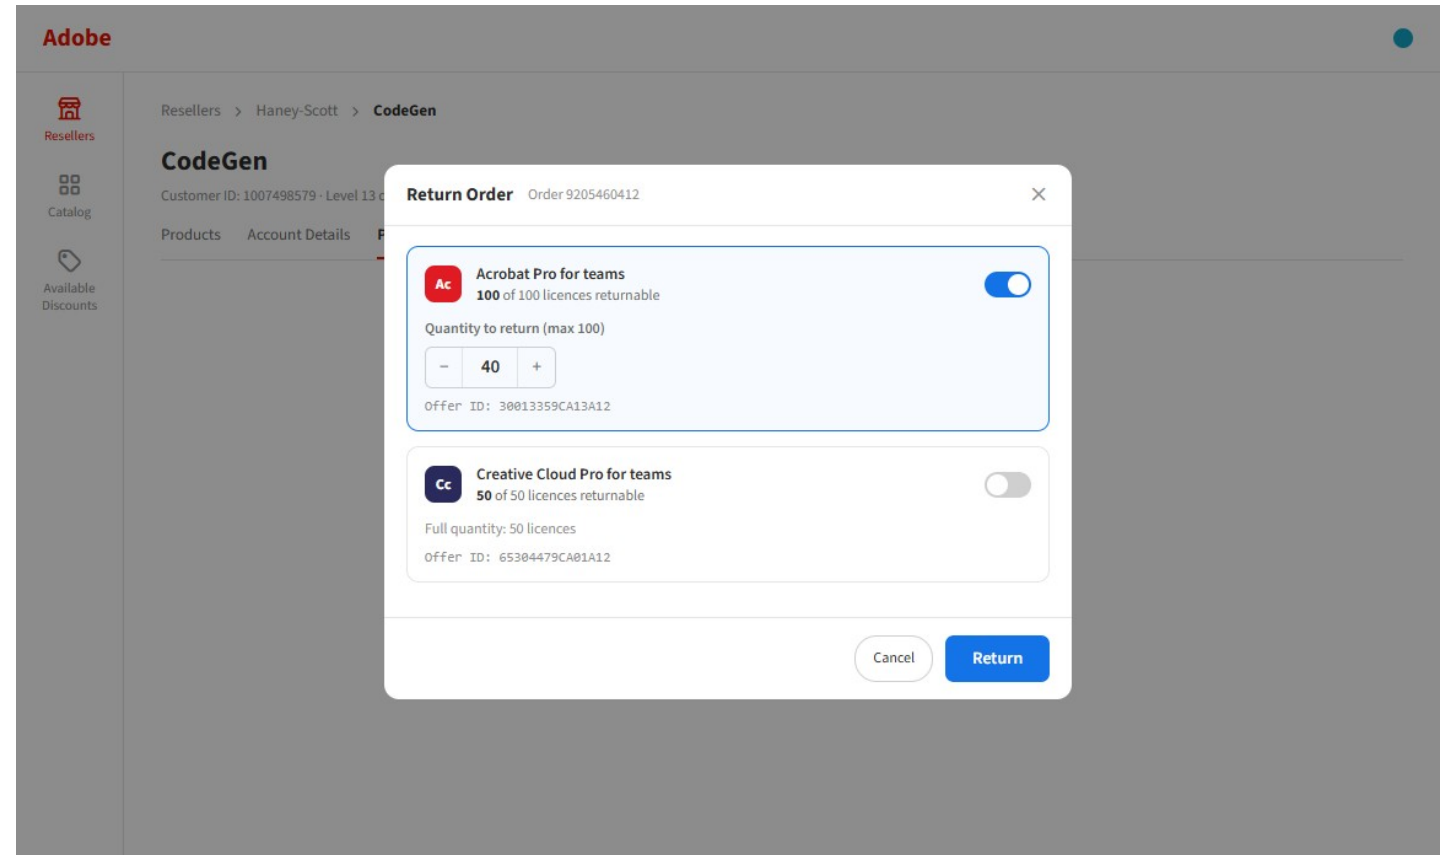

A PARTIAL RETURN

2

Return fewer licences than the full quantity

Toggle Acrobat Pro on and set Quantity to return to 40 of 100 — the field caps at the returnable amount. Creative Cloud Pro is left untouched.

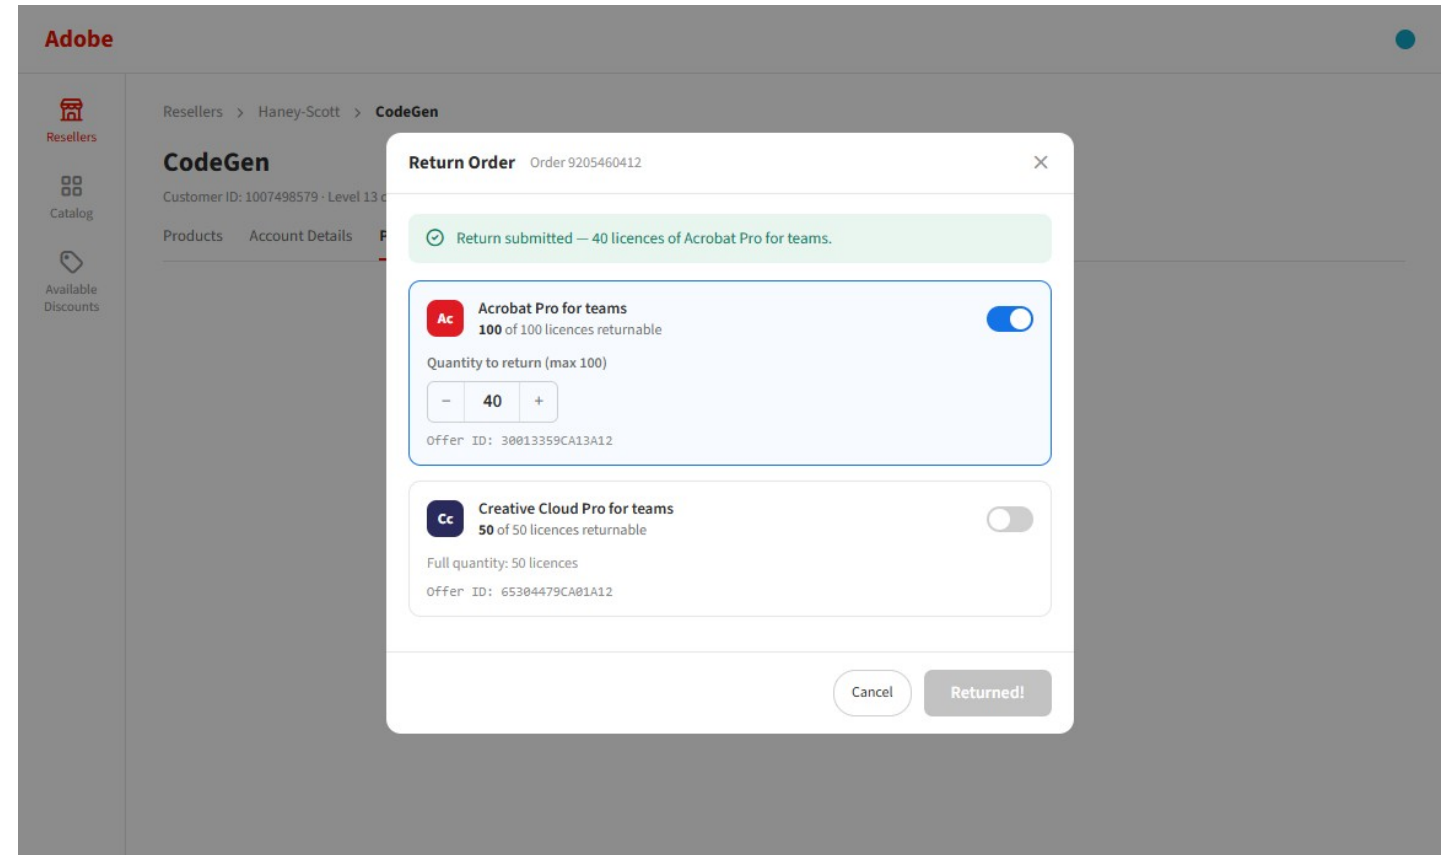

A PARTIAL RETURN

3

Submit the return

The RETURN order is placed directly — there is no pricing preview. A confirmation toast shows and the button reads Returned!

A PARTIAL RETURN

4

Purchase History updates

After a short delay the history refetches: the new RETURN order appears, and the original order stays eligible with 60 licences now remaining.

A PARTIAL RETURN

5

Read the processed credit

Returns carry no preview, but the processed amount is available afterwards from Order Details when pricing is requested — a \$7,200.00 credit for the 40 returned licences.

This is existing capability, not new to this feature.

API [Get Order Details](#)

SECTION 03

Returning again over time

Multiple partial returns against the same line item, capped by what's left.

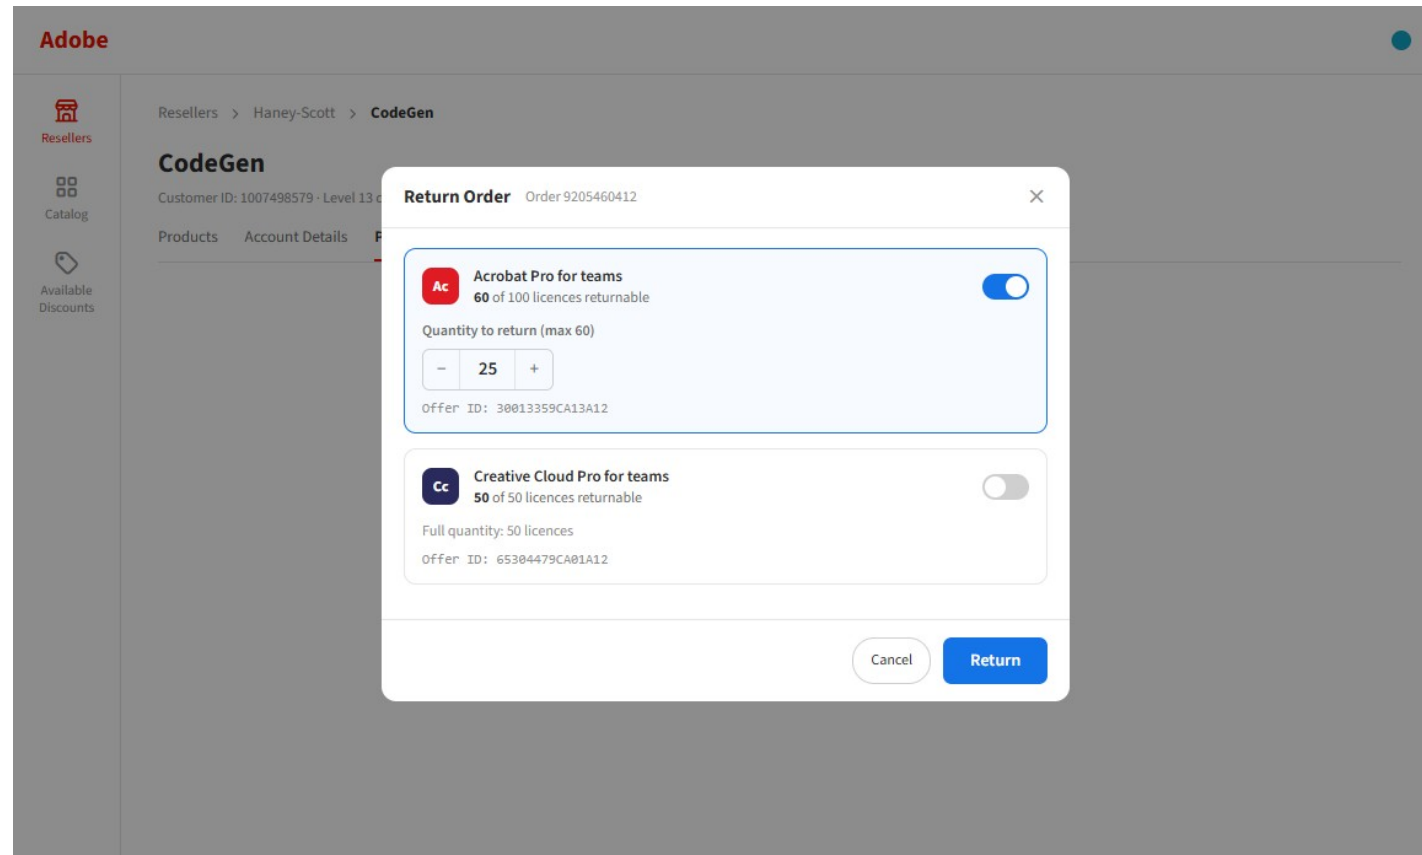

RETURNING AGAIN

1

Return again against the same line

Reopening the order shows Acrobat Pro as 60 of 100 returnable — the remaining reflects the earlier return. Return another 25; the field caps at 60.

Each request is checked against what's left, not the original quantity.

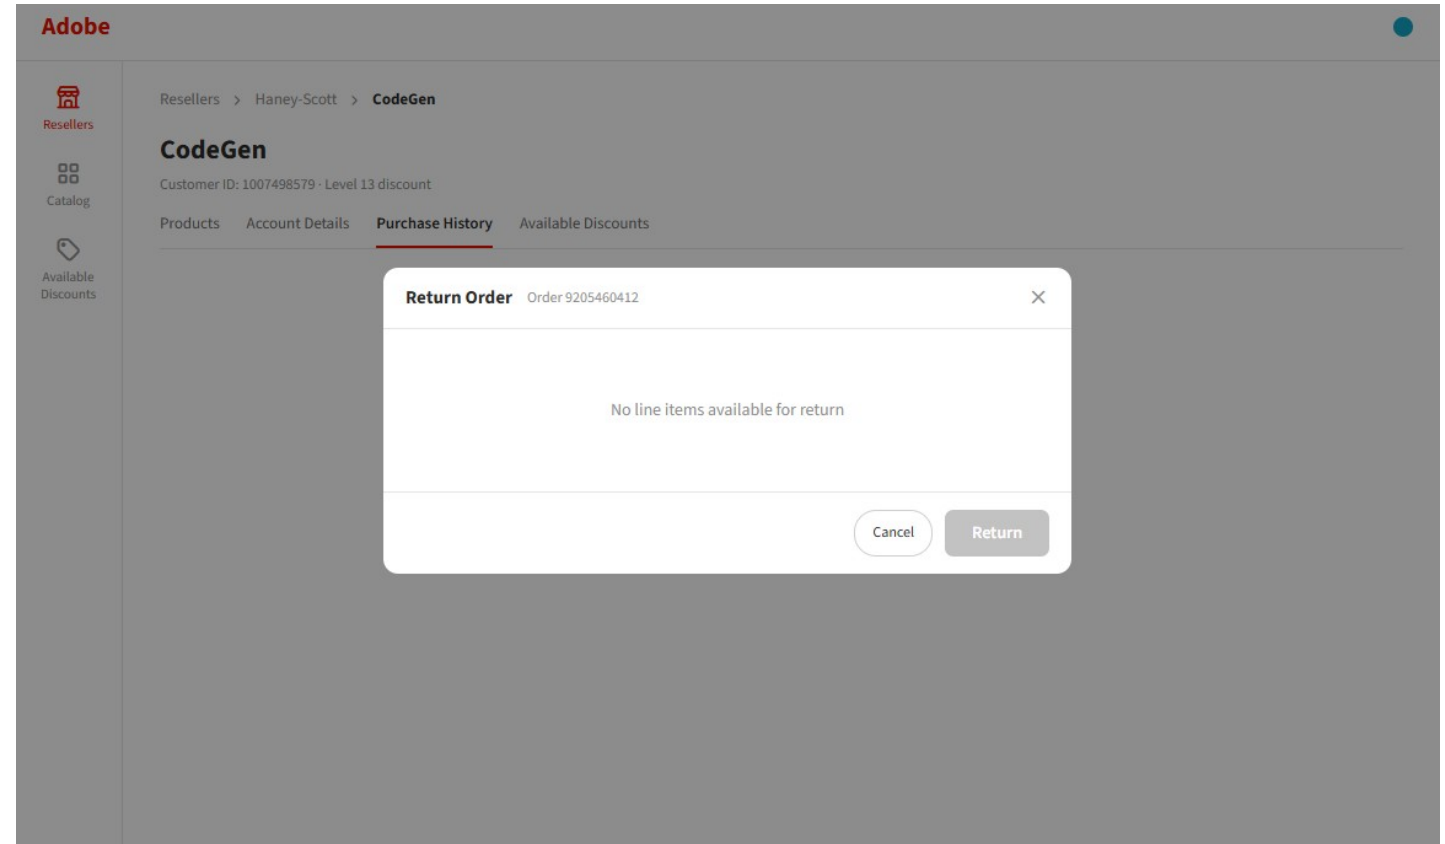

[API Create Order](#)

RETURNING AGAIN

2

When nothing is left to return

A line with zero remaining is dropped from the dialog. Once every line is fully returned, the dialog shows "No line items available for return."

SECTION 04

Guardrails

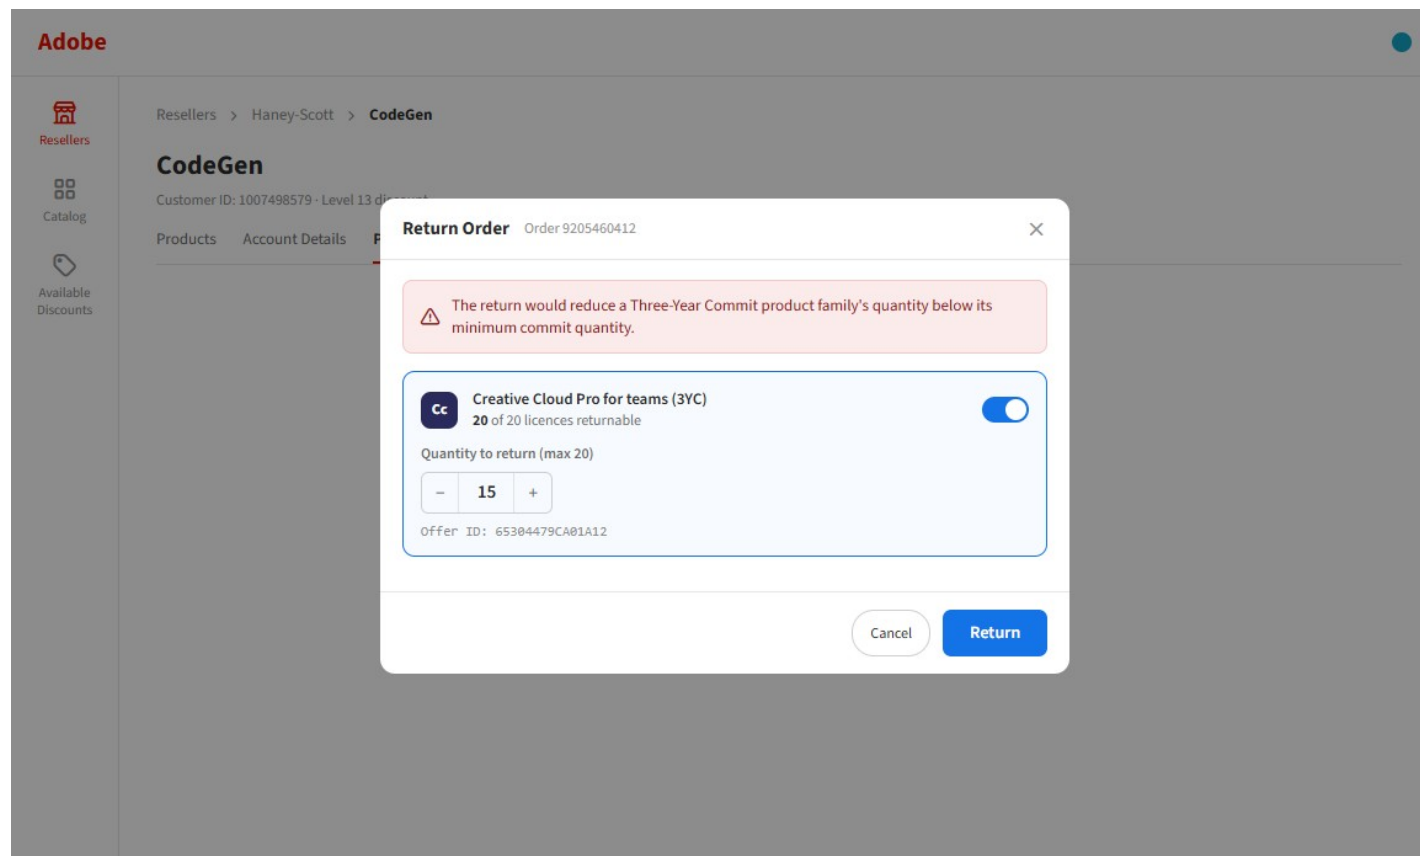

What blocks a return, surfaced with the partner-facing reason.

GUARDRAILS

Three-Year Commit minimums

If a return would take a Three-Year Commit family below its minimum commit quantity, it's rejected with the partner-facing reason.

The original order is left unchanged.

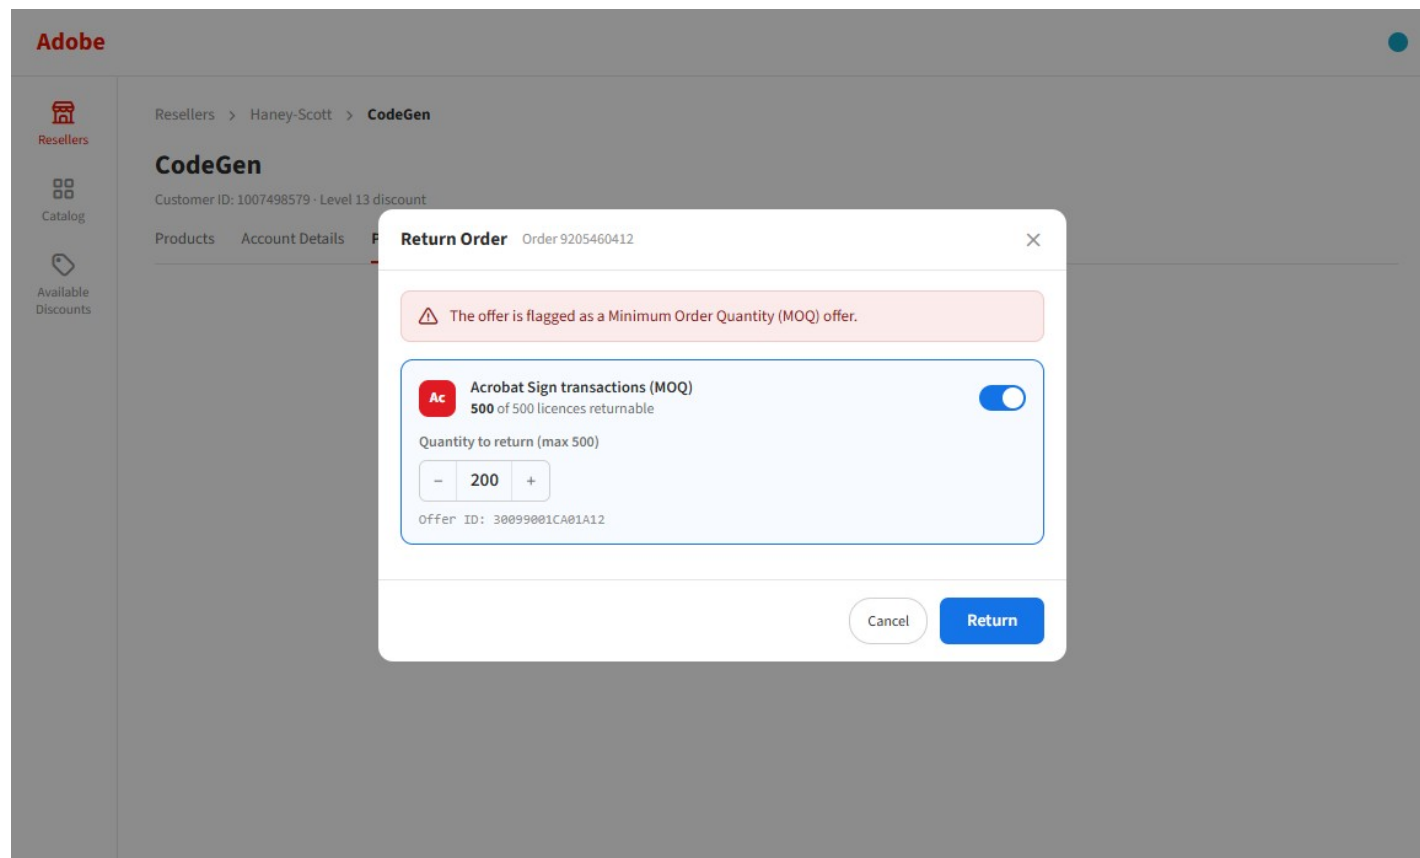

API Create Order

GUARDRAILS

Minimum Order Quantity offers

MOQ and consumable offers can't be partially returned; the dialog surfaces the partner-facing reason.

Unknown codes fall back to the raw backend message.
